Career Objective

Final-year Computer Science & Engineering student passionate about building real-world software and machine learning solutions. Proficient in **Java, Python, SQL, and Data Structures & Algorithms**, with hands-on experience in DBMS, Machine Learning, and data analytics. Developed projects involving **data preprocessing, exploratory analysis, feature engineering, and model training** using **Scikit-learn, Pandas, NumPy, JDBC, and MySQL**. Eager to contribute as a **Software Development or Machine Learning Engineer**, solving practical problems while continuously learning and growing in the field.

Education

B.Tech in Computer Science & Engineering College of Engineering & Management, Kolaghat	Expected Graduation: June 2027 Average SGPA: 8.12
Higher Secondary (Class XII) – Science Nabadwip Hindu School	2022 Percentage: 80%
Secondary Education (Class X) Nabadwip Hindu School	2020 Percentage: 74.43%

Technical Skills

Languages: Java, Python, C, SQL
Data Science Libraries: Pandas, NumPy, Scikit-learn, Matplotlib
Database & Tools: JDBC, MySQL, Git, GitHub
BI & Analysis: Power BI, Excel, EDA
Core CS: OOP, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

Projects

Secure Banking Management System [GitHub]	<i>Java, JDBC, MySQL, OOP</i>
- Developed a Java-based banking management application using Object-Oriented Programming principles to manage user accounts, authentication, account operations, and financial transactions. - Implemented core CRUD operations, account management, transaction processing, input validation, and authentication using modular Java classes and OOP concepts. - Integrated JDBC with MySQL for relational database connectivity, SQL queries, persistent data storage, and database transaction management.	
Restaurant Rating Prediction Engine [GitHub]	<i>Python, Scikit-learn, Pandas, NumPy</i>
- Developed a machine learning regression model to predict restaurant ratings using a structured dataset containing 5,000+ records. - Performed data cleaning, preprocessing, feature engineering, exploratory data analysis (EDA), and feature-based analysis to prepare data for model training. - Trained and evaluated regression models using MAE, MSE, RMSE, and R² to measure prediction accuracy and compare model performance.	
Customer Shopping Insights Dashboard [GitHub]	<i>Python, Pandas, Power BI, Excel</i>
- Analyzed 3,900+ customer records to identify purchasing patterns, customer segments, spending behavior, and business trends. - Performed data cleaning, preprocessing, exploratory data analysis, statistical analysis, and feature-based analysis using Python, Pandas, and NumPy. - Designed and developed interactive Power BI dashboards with data visualizations and business metrics to communicate customer behavior and actionable insights.	

Certifications

- GeeksforGeeks – Java Programming Certificate
- Infosys – Deep Learning Certificate
- Cisco – Data Science Certificate
- IBM – PW Generative AI Program
- IBM SkillsBuild – Decoding Data & Analytics

Languages

English, Bengali, Hindi
